KEVIN MORKAR

kevinmorkar@gmail.com ▪ 8799608668
Surat, Gujarat 395005, India (Open to relocation)

Control and Automation Engineer

Profile

Control & Automation Engineer with UK-based industrial experience in PLC commissioning, instrumentation diagnostics, and industrial process optimization. Experienced in energy and utility environments, with strong expertise in system troubleshooting, PID control, sensor calibration, and reliability improvement. Committed to ensuring operational safety, performance efficiency, and compliance with industrial standards. Open to relocation within the EU.

Experience

SN Autohaus & Co Ltd., London **Dec 2022 to Dec 2025**
Control and Automation Engineer

- Led installation, commissioning, and tuning of electronic, electromechanical, and automated control systems for industrial process, energy, and plant equipment, ensuring system stability and operational safety.
- Performed troubleshooting and root cause analysis on sensors, controllers, actuators, and communication systems in automated equipment, resolving faults to minimize downtime.
- Calibrated pressure, flow, temperature, and electrical sensors to ensure accuracy, reliability, and stable control performance in regulated environments.
- Analyzed real-time system data to optimize stability, response time, and operational safety using control loop techniques and diagnostics tools.
- Implemented preventive maintenance programs and reliability engineering practices, reducing unplanned downtime by ~15–20%
- Produced technical documentation including calibration reports, fault analysis, commissioning records, maintenance logs, and standard operating procedures (SOPs).
- Supported control and instrumentation systems in energy, compressed air, and process equipment similar to hydrogen and utility plant operations. - Applied Lockout/Tagout (LOTO) and safety procedures while handling high-energy electrical and mechanical systems to ensure compliance with industry regulations.
- Coordinated with OEMs and engineering teams for firmware upgrades, system improvements, hardware integration, and process optimization.

Essar Power Ltd., Hazira **Sep 2020 to Aug 2021**
Electrical Supervisor

- Supervised electrical and control technicians supporting thermal power plant and utility systems, ensuring safe and reliable plant operations.
- Monitored and maintained LV/MV electrical distribution systems, switchgear, transformers, and motor control centers (MCC).
- Supported troubleshooting of control circuits, protection relays, and instrumentation systems to minimize operational disruptions.
- Interpreted electrical and control schematics, single-line diagrams, and P&ID drawings for system diagnostics and maintenance planning.
- Coordinated preventive maintenance activities to ensure compliance with plant safety standards and regulatory requirements.
- Assisted in shutdown and startup procedures, ensuring adherence to safety protocols and operational guidelines.

Dakshin Gujarat Vij Company Limited (DGVCL) **Jun 2020 to Jul 2020**
Trainee Engineer

- Collaborated with a team of 15 engineers on the design and maintenance of substation electrical equipment.
- Applied academic knowledge to resolve engineering challenges using switchgear and protection methods.
- Developed single-line diagrams and gained practical experience in substation regulations and design codes.

Skills

- Industrial Control Systems: PLC-based systems (Siemens TIA portal, Allen bradley, ABB)
- DCS & SCADA environments
- Communication protocols: Modbus, CAN, HART, Profibus
- Sensors & Instrumentation (Pressure, Flow, Temperature, Electrical)
- Control Loops, PID Tuning & System Stability
- Fault Diagnostics, System Integration, Reliability Engineering
- Electrical & Testing: AutoCAD Electrical, Oscilloscope, Multimeter

Education

MSc : Electronics Engineering, Leicester Oct 2021 to Nov 2022
De Montfort University

BEng : Electrical Engineering, Surat Aug 2016 to Aug 2020
Sarvajanik College of Engineering and Technology
